                      MEDIATED BY A G-PROTEIN THAT ACTIVATES À PHOSPHATIDYLINOSITOL-
CALCIUM SECOND MESSENOER SYSTEM. MAY PARTICIPATE IN THE CENTRAL
ACTION OF GLUTAMATE IN THE CNS, SUCH AS LONG-TERM POTENTIATION I
THE HIPPOCAMEUS AND LONG-TERM DEFRESSION IN THE CEREBELLUM.
SUSCELLULAR LOCATION: INTERRAL MEMBRANE PROTEIN.
ALTERNATIVE PRODUCTS: THREE ISOFORMS; IA (SHOWN HERE), 1B AND 1C
ARE PRODUCED BY ALTERNATIVE SPLICING. 1B AND 1C ARE C-TERMINALLY
TRUNCATED FORMS OF 1A.
TISSUE SPECIFICITY: IS PREDOMINANTLY EXPRESSED IN CEREBELLAR
PURKINUE CELLS, CA2-CA3 PYRAMIDAL CELLS OF THE HIPPOCAMPUS, AND
MITRAL AND TUFTED CELLS OF THE OLFACTORY BULB.
MISCELLANEOUS: ACTIVATED BY QUISQUALATE > GRUTAMATE > IBOTENATE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FVPKVYIILAKPERNVRSAFTTS

TISSUE SPECIFICITY: STRONGLY EXPRESSED IN THE CEREBELLUM.

EXPRESSED AT LOW LEVELS IN HIPPOCAMPUS, HYPOTHALAMUS AND
THALAMUS. NO EXPRESSION DETECTED IN LIVER.

SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 STRONGEST,

SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

TISSUE SPECIFICITY: IS WIDELY DISTRIBUTED IN THE CNS. PREDOMINANT EXPRESSION IS SEEN IN THE GRANULE CELLS OF THE CEREBELLUM.

EXPRESSION IS SELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      s SWISS-PROT entry is copyright. FUNCTION: RECEPTOR FOR GLUTAMATE. THE ACTIVITY OF THIS RECEPTOR.

MEDIATED BY A G-PROTEIN THAT ACTIVATES A PHOSPHATIDYLINOSITOL-
CALCIUM SECOND MESSENGER SYSTEM. MAY PARTICIPATE IN THE CENTRAL
ACTION OF GLUTAMATE IN THE CNS, SUCH AS LONG-TERM POTENTIATION 1
THE HIPPOCAMPUS AND LONG-TERM DEPRESSION IN THE CEREBELLUM.
SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
ALTERNATIVE PRODUCTS: TWO ISOFORMS; ALPHA (SHOWN HERE) AND BETA,
ARE PRODUCED BY ALTERNATIVE SPLICING.
SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SWISS-PROT entry is copyright. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY A G-PROTEIN THAT INHIBITS ADENTHATE CYCLASE ACTIVITY. MAY MEDIATE SUPPRESSION OF NEUROTRANSMISSION OR MAY BE INVOLVED IN SYNAPTOGENESIS OR SYNAPTIC STABILIZATION.

SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

TISSUE SPECIFICITY: IS WIDELY DISTRIBUTED IN THE CNS AND PROMINENT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: RECEPTOR FOR GLUTAMATE. THE ACTIVITY OF MEDIATED BY A G-PROTEIN THAT INHIBITS ADENIVATE CY MAY MEDIATE SUPPRESSION OF NEUROTRANSMISSION OR ME SYNAPTOGENESIS OR SYNAPTIC STABILIZATION.

SUBGELULIAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

TISSUE SPECIFICITY: WIDELY EXPRESSED IN DIFFERENT ADULT BRAIN AS WELL AS IN FETAL BRAIN.

SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 STRONGEST, TO MGLUR3

"A family of metabotropic glutamate receptors.";
Neuron 8:169-179(1992).
-i-FUNCTION: RECEPTOR FOR GLUTAMATE. THE ACTIVITY OF THIS REC!
-IS_MEDIATED BY A G-PROTEIN THAT INHIBITS ADENYLATE CYCLASE
                                                                                                                                                                                                                                                                                                                             ACTIVITY.

SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

TISSUE SPECIFICITY: IS WIDELY DISTRIBUTED IN THE CNS. PREDOMINAN EXPRESSION IS SEEN IN THE NEURONAL CELLS OF THE CEREBRAL CORTEX, DENTATE GYROS, AND GLIAL CELLS THROUGHOUT BRAIN REGIONS.
                                                                                                                                                                                                                                                                                    SIMILARITY: BELONGS T
STRONGEST, TO MGLUR2.

Release 3.1A John F. Collins, Biocomputing Research Unit. Copyright (c) 1993-1998 University of Edinburgh, U.K. Distribution rights by Oxford Molecular Ltd

Run on: MPsrch_pp protein - protein database search, using Smith-Waterman algorithm Fri Mar 17 13:15:12 2000: MasPar time 35.30 Seconds 955.673 Million cell updates/sec

Tabular output not generated.

>US-09-361-652-2 (1-842) from US09361652.pep 6366

Description: Perfect Score: Sequence: 1 MLFWAAHLLLSLQLAVAYCW.....NNTEHFQASIQDYTRRCGTT 842

Scoring table: PAM 150 Gap 11

Searched: 122810 seqs, 40068593 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: pir62 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 52.559; Variance 107.285; scale 0.490

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
